Attenuation bias: ŷ vs noise level
(T_max from true model, n=318)
MC mean ŷ
95% CI
VBLS true: γ = −1.000
Observed: γ = -0.6561
CV ≈ 66% (full explanation)
CV = 40% → ŷ ≈ -0.825
Estimated slope ŷ
Coefficient of variation of P/M (%)
Slope distributions at two noise levels
(N=2000 simulations, n=318 species)
CV=40%, mean=-0.8238
CV≈66%, mean=-0.6569
VBLS: −1.000
Observed: -0.6561
Density
Estimated slope ŷ
