VBLS vs Observed Lifespan — Variant A: all 9 species, single R^*_{univ}
$t_B = (1 - R^*_{univ}) / \nu^*$ | $R^*_{univ} = 0.514$ (mean of all 9)
R(t)-channel species (n=7)
E(t)-channel species (n=2, telomere not limiting)
All 9: MAPE=35.9%, R²_log=0.909
Sumatran elephant
Human
American flamingo
Bottlenose dolphin
Griffon vulture
Audouin's gull
Goat
Reindeer
Mouse
