Lifecycle curves for 9 species: VBLS + telomere dynamics + damage accumulation rate $d\Sigma/dt$
Whittemore et al. (2019) PNAS | Blue — $R(t)$ channel, red — $E(t)$ channel | [1] = first active threshold

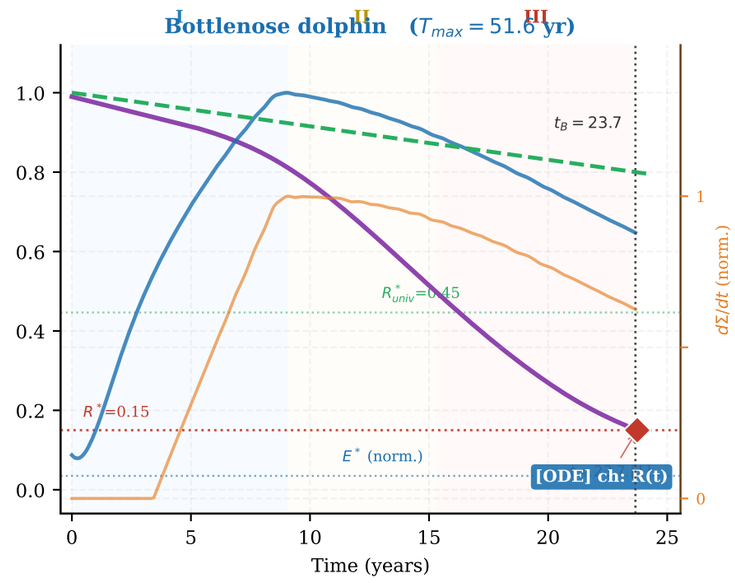

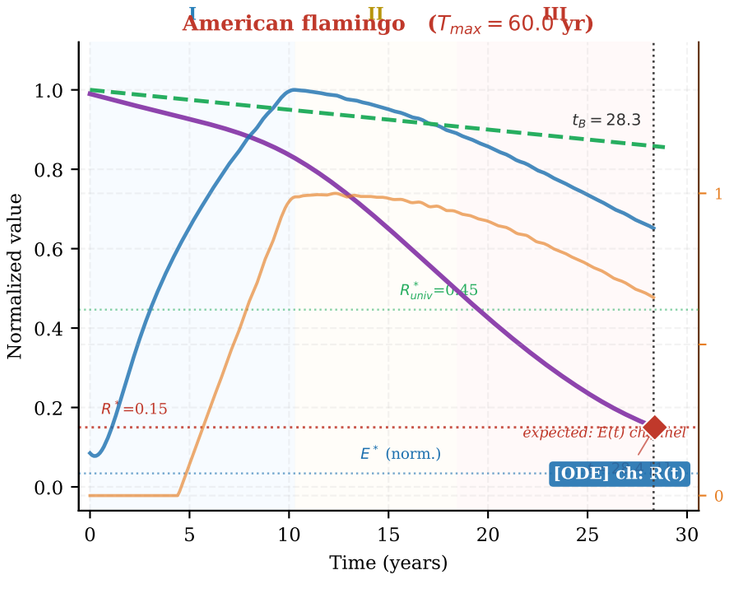

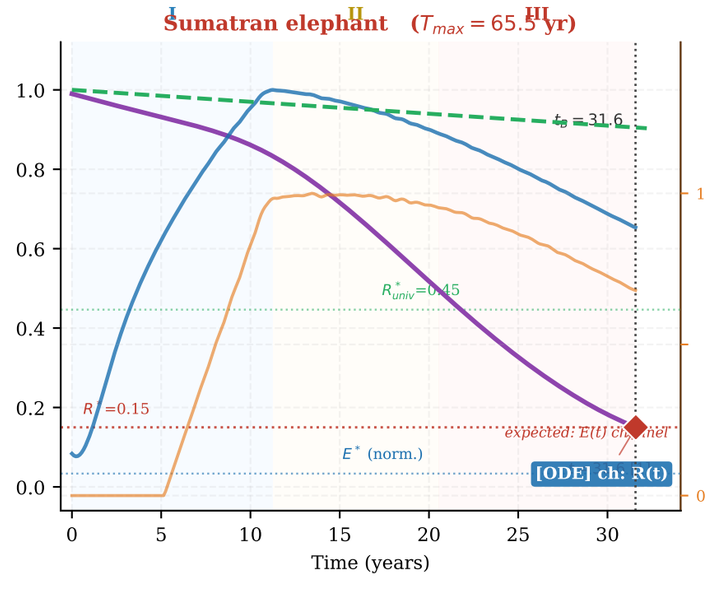

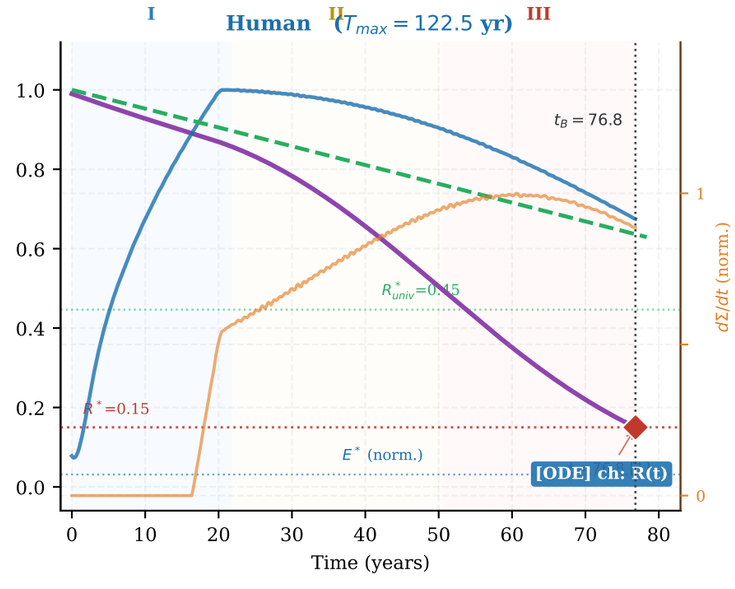

Legend | [1] = first active channel = death event t_B

- Phase I — Growth
- Phase II — Plateau
- Phase III — Degradation
- $R(t)$ — repair reserve (VBLS)
- $E(t)$ — integrity potential (VBLS, norm.)
- $T(t)$ — telomere reserve (Whittemore 2019)
- $d\Sigma/dt$ — damage accumulation rate (right axis)
- $R^* = 0.15$ — VBLS threshold
- E^* — viability threshold (norm.)
- $R^*_{univ} = 0.45$ — telomere threshold
- [1] first channel = death event t_B
- second channel (non-limiting)
